1 INTRODUCTION

This is a \LaTeX template created following the Project Report Guidelines of the Examination Office at the International University of Applied Sciences. Please review carefully if all the details in this template are the same as those in the official guidelines.

1.1 Content

In general, reports:

- introduce a topic, explaining the motivation and goals of the work,
- describe the method,
- present the results, and
- conclude discussing the implications of the work.

2 EXAMPLES

The captions of tables and figures should clearly explain the presented content, see for example Table 1 and Figure 1. Next, an example of a mathematical expression, where x is the input to a Rectified Linear Unit (ReLU) activation function (Goodfellow et al., 2016):

$$f(x) = \max(0, x). \quad (1)$$

Finally, this is how you cite a book Velarde (2023), an article (LeCun et al., 1989), and online material (Stutz, 2020).¹

Study program	Report length
BACHELOR	7 – 10 pages of text
MASTER	12 – 15 pages of text

Table 1: Length of reports in number of pages according to the study program.

Figure 1: Architecture of a convolutional neural network (LeCun et al., 1989). This network has two convolutional layers, each followed by a subsampling layer. A fully connected layer precedes the output layer. The latex code for this image was adapted from (Stutz, 2020)

¹Please avoid using footnotes.

3 CONCLUSION

This template should help you get started with your report. Remember to double-check with the format of the official guidelines.
