PROJECT PROPOSAL TEMPLATE

Gissel Velarde

October 27, 2026

Contents

1 Introduction **3**

2 The State-of-the-art **3**

3 Objectives **3**

4 The method **3**

4.1 Data 3

5 Results **4**

6 Expected Contributions / Conclusion **4**

A The plan **4**

B Agreements and constraints **4**

References **5**

Abstract

(200 words maximum) The abstract should state the motivation, that is, why the study will be done or which problem will be addressed, which method will be used, as well as the expected results and contributions or implications of the work. Give details. See for example the abstract in (Krizhevsky, Sutskever, & Hinton, 2017). In addition, include a graphical abstract as seen in Figure 1.

Abstract

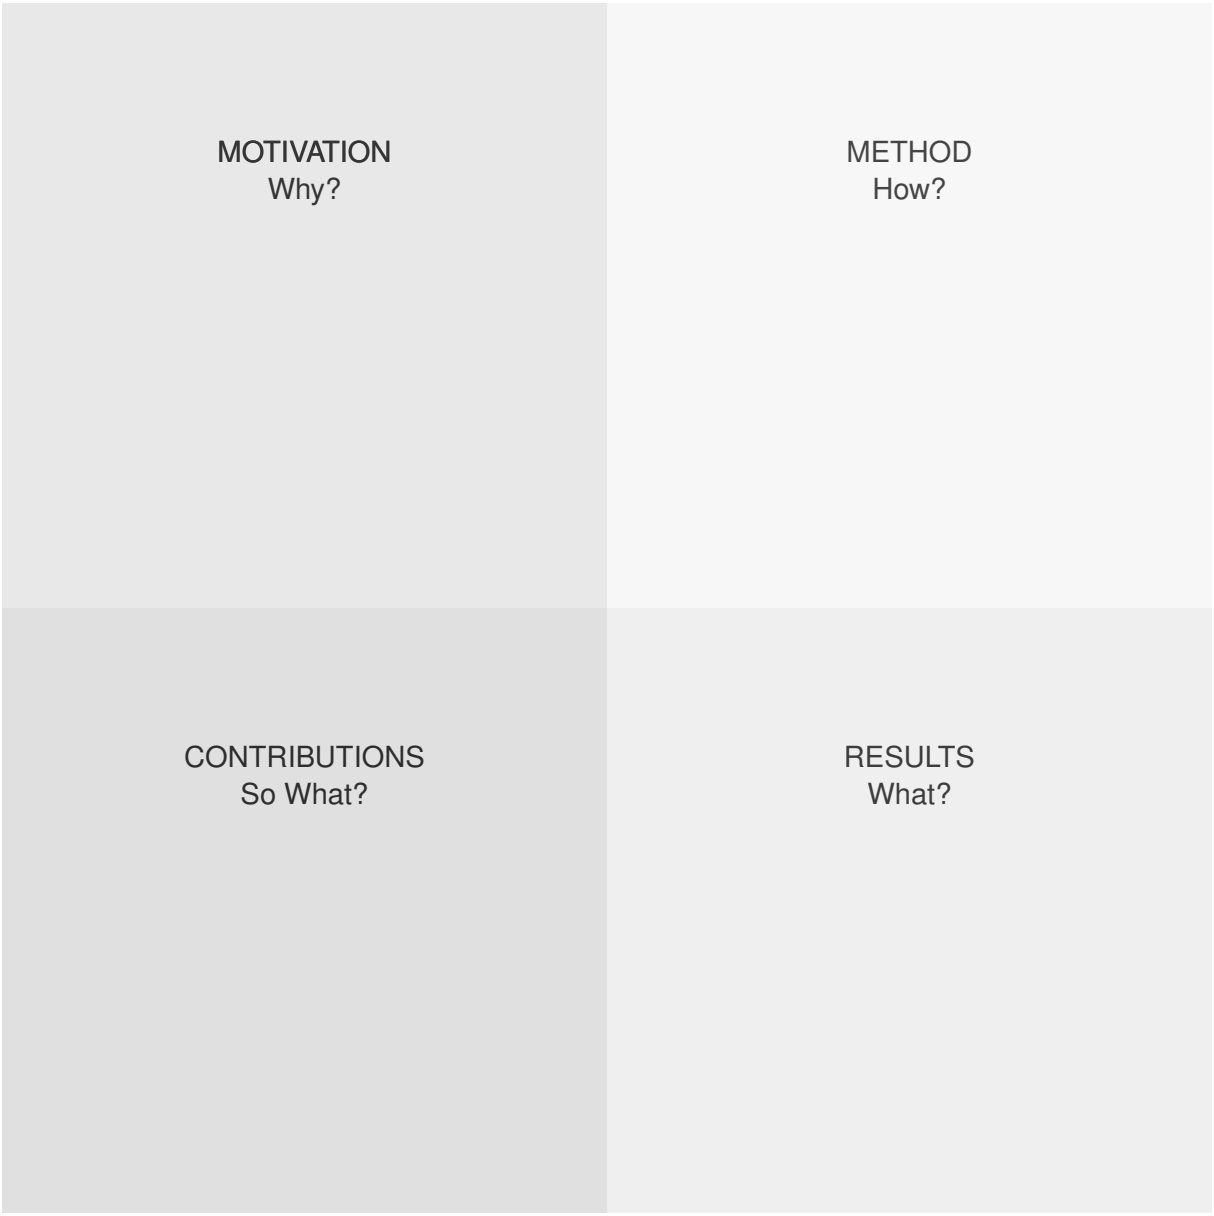

Figure 1: Graphical Abstract. Include a graphical abstract of the proposal with the motivation, method, expected results and contributions. Examples of graphical abstracts can be found in (Elsevier, 2024; Velarde et al., 2024).

1 Introduction

(30 words maximum.) Introduce the topic in one sentence. As the project advances, this template should be updated until it becomes the final document.

2 The State-of-the-art

(100 words maximum, 2 research papers minimum, 1 Comparison Table) Describe and reference the state-of-the-art, primarily focussing on peer-reviewed scientific publications. Explain how these works relate to your proposal. Use the American Psychological Association (APA) style for citations (Hughes et al., 2017).

Present the State-of-the-art in a comparison table. Fill or adapt Table 1. For example, if the task is classification, the performance column should include the reported F1, Precision, and Recall on a given dataset or datasets. Add a comment if necessary.

Reference	Task	Performance	Dataset	Comment

Table 1: State-of-the-art comparison Table.

3 Objectives

(About 20 words per sentence.) Describe the main objective and sub-objectives of the project. Alternatively propose a hypothesis and its research questions.

- First sub-objective.
- Second sub-objective.
- Third sub-objective.
- Fourth sub-objective.

4 The method

(Include a Figure. Describe it in maximum 30 words.) Present the intended method graphically. Fill Figure 2.

4.1 Data

(Minimum 1 Dataset) List and describe the dataset or datasets to be used.

Figure 2: Present the intended Method. Include the intended dataset, techniques, and evaluation framework. Add as much detail as possible in the figure. See for example Figure 1 in Sossi-Rojas et al. (2023, p. 2), or Figure 2 in Badrinarayanan et al. (2017, p. 4).

5 Results

(Include a table.) Present a comparison table with expected own results as in Table 2. See for example Tables 1 and 2 in Krizhevsky et al. (2017, p. 7).

Model	**Top-1**	**Top-5**	**Dataset**	**Comment**
CNN (Krizhevsky et al., 2017)	37.5 %	17.0 %	ILSVRC-2010	On GTX 580 3GB GPUs
Expected own result	to be tested	to be tested	ILSVRC-2010	To be trained on Google Colab

Table 2: Expected Results on ILSVRC-2010 dataset (Berg, Deng, & Fei-Fei, 2010).

6 Expected Contributions / Conclusion

(Maximum 5 sentences of less than 25 words each) List 2 to 5 expected contributions of your proposed project. This section can be renamed as ”Conclusion”.

A The plan

(Include a Gantt chart with tasks and their expected duration) Include the specific dates of begin and end.

B Agreements and constraints

(100 words maximum) State if:

- the work can be published without restrictions, or if it needs a confidentiality agreement.
- In addition, mention the stakeholders if any.
